for Causal Analysis in Set-Theoretic Multimethod Research Ingo Rohlfing¹ and Carsten Q Schneider² Abstract The combination of Qualitative

Comparative Analysis (QCA) with process tracing, which we call set-theoretic multimethod research (MMR), is steadily becoming more popular in empirical research. Despite the fact that both

Multi-Method Research: The Case for Formal Theory

we would argue, because targeted historical research (in the form of case studies and process tracing of causal mechanisms) is well suited, and arguably better suited, to evaluate the empirical usefulness of formal models. For example, a common complaint of formal models is that the assumptions that drive the model often don't hold "universally"

Sociological Methods & Research Integrating Cross-case ^a ...

causal mechanisms, causal inference, qualitative comparative analysis, typological theory, mixed-methods research, multimethod research. In recent years, there has been a steady trend toward empirical research combining at least two methods. In particular, the combination of large-n and
