

## PRACTICE NAMING ALKANES WITH ANSWERS

Jan 17, 2021

[Practice Naming Alkanes With Answers](#)

Naming alkynes follows the same rules we discussed earlier for the IUPAC nomenclature rules for alkanes. This is the brief summary of steps: Step 1. Identify the parent chain. Step 2. Identify the substituents. Step 3. Number the parent chain giving the triple bond the lowest locant. Step 4. Put everything together having the substituents in alphabetical order. And this is an example of naming ...

The basic rules for naming alkenes are the same as those for the nomenclature of alkanes, except that we change the suffix to -ene. > Find the longest continuous chain of carbon atoms that contains the "C=C" double bond. If you have two ties for longest continuous chain and both chains contain a "C=C" double bond, then choose the chain with more substituents.

Want more practice naming alkanes? Watch this brief video tutorial to review the nomenclature process. Alkenes . Organic compounds that contain one or more double or triple bonds between carbon atoms are described as unsaturated. You have likely heard of unsaturated fats. These are complex organic molecules with long chains of carbon atoms, which contain at least one double bond between carbon ...
